

Tritone Cream User Guide

TRITONE CREAM FOR DARK SKIN SPOTS WHAT ARE THE REASONS OF BROWN SPOTS?

Skin pigmentation and dark/brown spots may develop due to a variety of factors. Factors such as sun exposure, aging and pregnancy may cause increasing of skin pigmentation. Tritone cream helps to regulate skin color and eliminate pigmented spots. It helps to establish more homogenous skin color. The skin should be also protected from harmful sunrays in order to prevent these spots.

Tritone cream has special ingredients acting powerfully on dark skin spots:

Kojic acid (2%)

Arbutine (2%)

Glabridine (Licorice extract (0.1%)

Glycolic acid (6%)

Ascorbic acid (2%)

ATTENTION!

For external use only! If irritation develops, it is recommended to reduce the frequency of application. If necessary, stop using it. Avoid contact with eyes, mouth and mucous membranes. Seek professional advice if necessary.

Keep out of reach of children in original package. Transient burning sensation may occur in individuals with sensitive skin. Apply product on area where spots are located. Do not use in children under the age of 12 years.

DIRECTIONS FOR USE

Apply TRITONE CREAM twice daily on effected area and gently rub in. While applying Tritone it is advised to use sun protecting product with at least SPF 30 or higher.

When used at first time, stinging and burning may develop. This is an expected condition. It will diminish after some weeks. First result can be obtained within 3-4 weeks after the beginning of application. However, for best results the product should be used for 4-6 months.
